PROFESSIONAL SUMMARY

Technical product and commercial leader with an MS in Machine Learning and Controls from Carnegie Mellon and hands-on experience commercializing robotics. Drove 2x+ revenue growth at AUBO Robotics by translating customer feedback into pricing and product strategy, building GTM and partner networks, and scoping automation solutions. Builds AI driven tools with Claude, n8n and collaborates across resources constrained teams to achieve 90% efficiency improvement.

EXPERIENCE

Robotics Business Development Lead Feb 2024 – Present
AUBO Robotics USA *Romulus, MI*

- Drove 2x+ revenue growth helping build AUBO's North American market from the ground up, working across sales, marketing, and engineering in a lean startup team.
- Synthesized customer feedback with competitive intelligence into actionable product and market insights, translating findings into business recommendations and working with product team to inform roadmap priorities and pricing strategy.
- Designed and built a quote generation system (50% faster, 90% fewer errors) and guided an intern in rebuilding the inventory system to eliminate errors and add traceability; now leading an AI-driven outbound pipeline (n8n, Apollo, LLM integrations and agentic workflows) achieving a 90% cut in outreach time and currently awaiting sales results.
- Managed accounts including distributor, integrator, and OEMs; developed channel pricing and GTM strategy across North America and trained and certified 30+ partner organizations to improve onboarding and deployment success.
- Led cobot integration and application scoping across welding, palletizing, screwdriving, and vision-guided bin picking; partnered with integrators to deliver end-to-end solutions.

Project Management Intern Jun 2020 – Oct 2021
AGS Automotive Systems *Toronto, ON*

- Managed 10+ concurrent capital improvement projects totaling $200k.
- Negotiated vendor contracts delivering approximately $160k in savings over 3 years and presented recommendations directly to the president and leadership.

SKILLS

AI / Automation Tools: Python (PyTorch, OpenCV), Claude, OpenAI, AWS, GCP, n8n, Gen AI
Product and Market: Competitive Intelligence, Market Analysis, Solution Scoping, Pricing Strategy, Customer Research, GTM, Customer Relationship Management, Google Analytics, Figma
Robotics and Platforms: AUBO Studio, RoboDK, Cobot Integration (PLCs, vision systems, sensors, EOAT), API
Engineering: SolidWorks, AutoCAD, MATLAB, C++, Julia, Excel, Data Analysis, Data Analysis, SQL

EDUCATION

Carnegie Mellon University Pittsburgh, PA
Master of Science, Mechanical Engineering. Focus: Machine Learning and Controls. GPA:3.97/4.0 *Dec 2023*
Relevant Coursework: Advanced Control Systems, Visual Learning and Recognition, Deep Learning, Computer Vision

PROJECTS

Control Stabilization for Dual-Quadrotor Payload Delivery

- Led firmware modification in C and development of a Python swarm control API for dual-drone payload transport; tuned cascaded PID controllers and implemented payload-based gain adjustment.
- Evaluated performance and achieved 43% increase in payload capacity and 26% reduction in trajectory error.

Dense Video Captioning with Semantic Alignment

- Led a 4-person team integrating custom semantic alignment (CLIP embeddings, cosine similarity loss) into a transformer-based video captioning framework, translating multimodal techniques into measurable improvements in performance.
- Achieved 8% improvement over baseline in caption coherence and semantic accuracy across defined evaluation criteria.

Diffusion-Based Comic Generation Pipeline with Few-Shot Finetuning

- Built a text-to-comic diffusion pipeline using ControlNet and few-shot style transfer.
- Applied feature-based style loss and inference tuning to generate stylistically coherent comic panels from user prompts.
